Introduction to Computational Fluid Dynamics using OpenFOAM and Octave

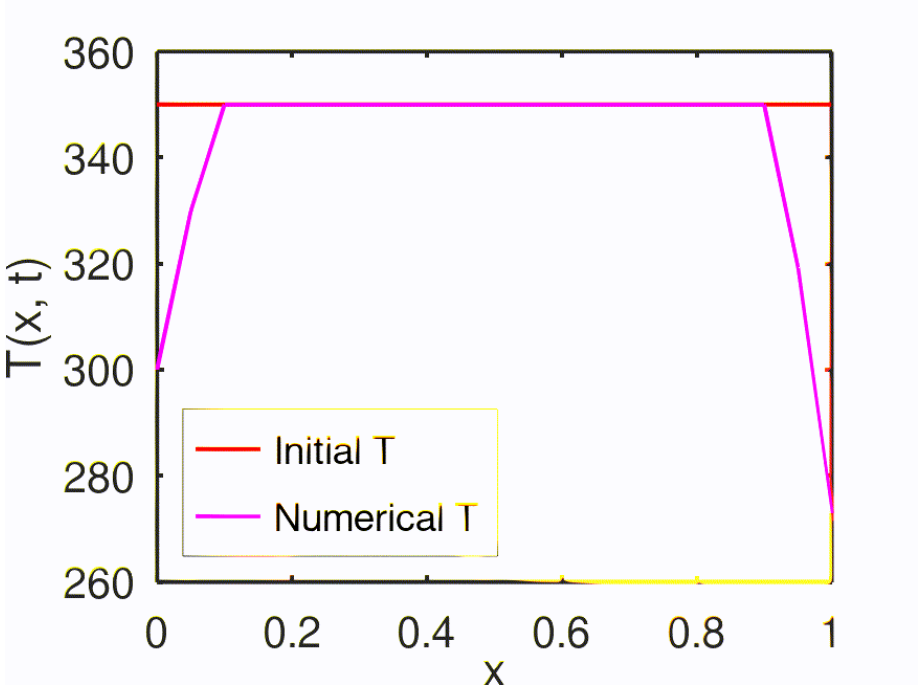
Dr. Lakshman Anumolu (Sr. Research Engineer)
Kumaresh Selvakumar (PhD candidate)
(Session-10)

Instructions: Wed, Fri (4:30-5:30PM IST), Sat (4PM-5PM IST)
Query sessions: Sundays 9:00AM-9:30AM IST

Quick Recap

What Did We Discuss?

$$\frac{\partial T}{\partial t} = \alpha \frac{\partial^2 T}{\partial x^2}$$



```cpp
#include <iostream>
#include <vector>
#include <cmath>

std::vector<float> compute_rate_of_convergence(std::vector<float> errors, std::vector<float> dx) {
    std::vector<float> roc;

    for (int i = 0; i < errors.size()-1; ++i)  {
        float r = log(errors[i]/errors[i+1])/log(dx[i]/dx[i+1]);

        roc.push_back(r);
    }

    return roc;
}

int main()
{
    std::vector<float> errors({0.16, 0.0775, 0.038125});
    std::vector<float> dx({0.1, 0.05, 0.025});

    std::vector<float> roc = compute_rate_of_convergence(errors, dx);

    for (int i = 0; i < roc.size(); ++i) {
        std::cout << roc[i] << std::endl;
    }

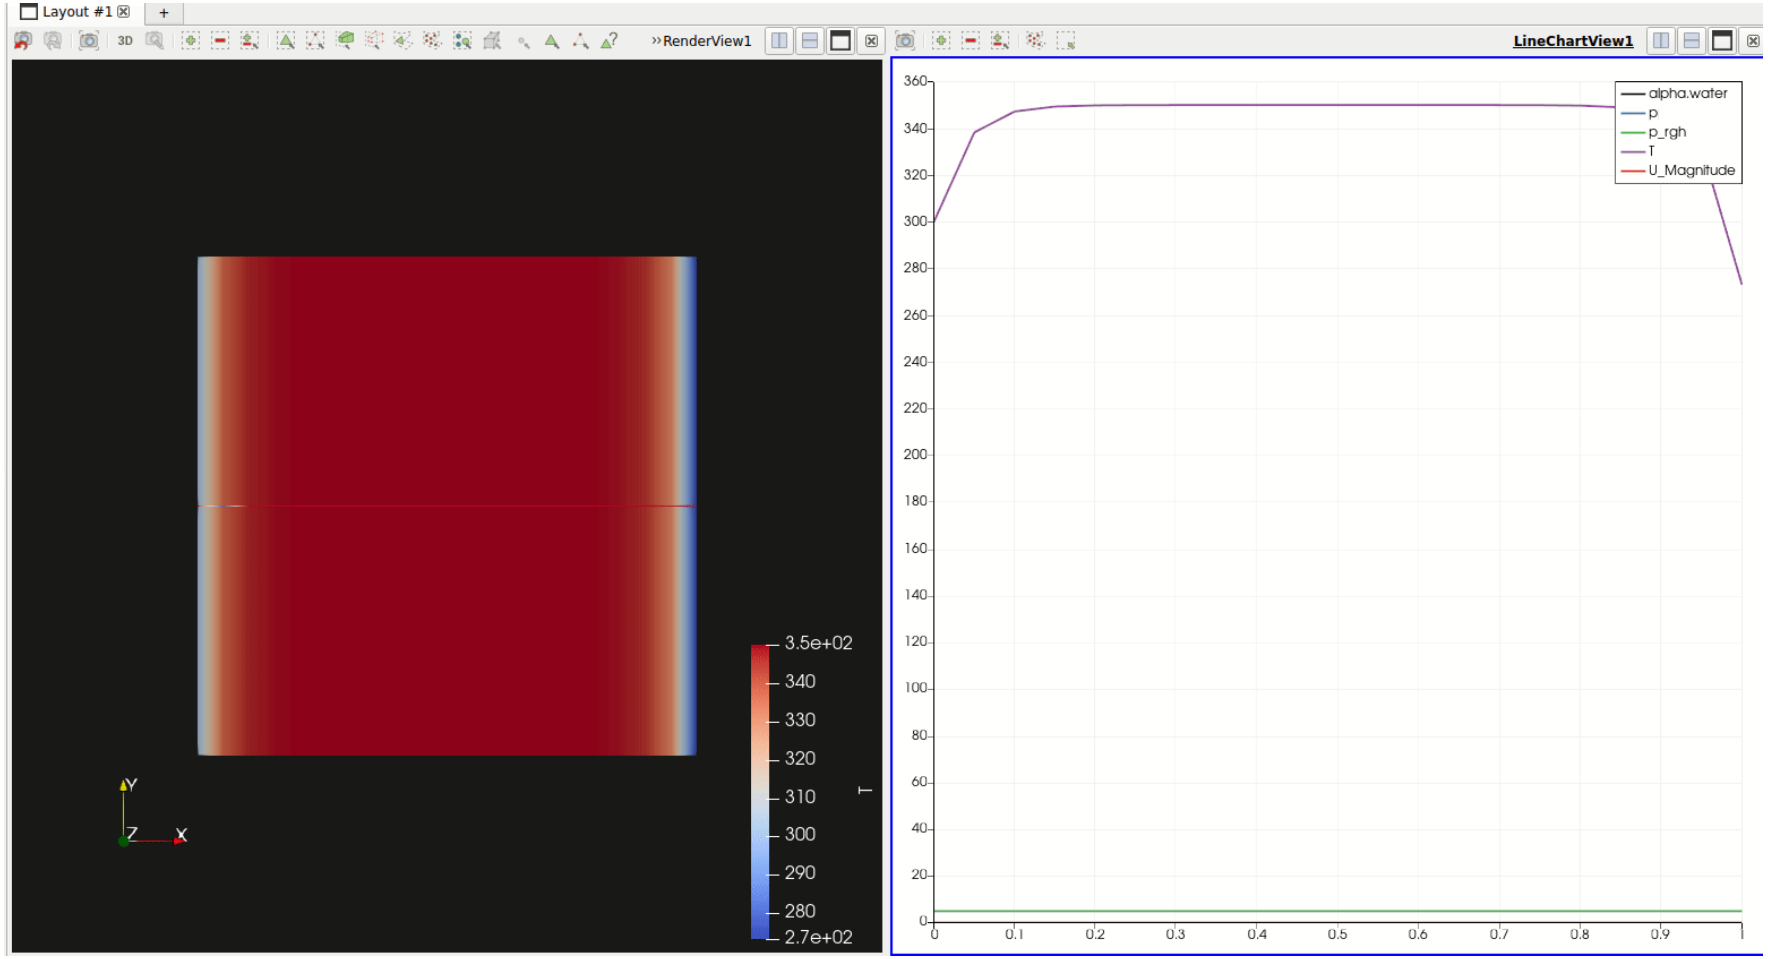
    return 0;
}
```

Current Session

Overview

- **OpenFOAM**: Numerical Solution to Diffusion Equation
- Introduction to C++ for OpenFOAM (contd.)

Numerical Solution to Diffusion Equation



$$\frac{\partial T}{\partial t} = \alpha \frac{\partial^2 T}{\partial x^2}$$

Introduction to C++ for OpenFOAM

b10_roc.cpp

Next Session

- Finite difference method to solve convection equation in Octave
- Introduction to C++ for OpenFOAM (Contd.)
